Water pollution: Council and Parliament reach provisional deal to update priority substances in surface and ground waters

Today, the Council presidency and the European Parliament's representatives reached a **provisional political agreement** on a proposed directive to review and update the lists of **pollutants affecting surface waters and groundwater** and corresponding regulatory standards. This agreement updates environmental quality standards for a number of pollutants and adds new ones, aligning EU water policy with the latest scientific evidence.

The revision is an important step in **safeguarding water quality** in Europe. It strengthens the framework for tackling harmful chemicals, enhances monitoring, and ensures that rules remain coherent with the river basin management plans that guide water policy implementation across the EU.
